Project idea

The main goal of the Data Mining phase was to extract useful insights and patterns from the fitness and health database. Our purpose was to use predictive and qualitative analytics in order to enhance user engagement and commitment in their fitness journey so we can benefit our customers.

DATA SOURCE

Kaggle Dataset: “FitLife Health and Fitness Tracking”

78MB

Dataset Size

Contains daily activities,
vital health metrics and
lifestyle factors

3000

Participants

Users from various age
groups and fitness
levels

1 year

Tracking

Daily health records for
long term health
analysis

Classification

Clustering

Clustering

Cluster Summary:										
	age	bmi	duration_minutes	calories_burned	avg_heart_rate	hours_sleep	stress_level	daily_steps	hydration_level	fitness_level
cluster										
0	31.96	23.08	95.38	32.19	144.26	6.86	5.44	7569.62	2.44	19.14
1	52.15	23.39	94.06	27.72	119.89	7.15	5.11	8065.73	2.62	18.88
2	51.57	22.88	45.92	11.94	119.81	6.92	5.24	7726.20	2.46	19.03
3	30.20	21.65	49.42	12.66	144.63	7.24	5.20	8234.90	2.49	18.71
