GAME DESCRIPTION

Echoes of the Heart is an interactive narrative game where the player, as a third party, intercepts the email exchange of two psychologists discussing love and relationships. The challenge is to impersonate one of them convincingly, shaping the conversation while avoiding detection.

KEY FEATURES OF THE GAME

Text-based email interactions with multiple-choice responses

Credibility scoring system (3 "hearts" representing detection risk)

Branching narrative based on player choices

10-email exchange culminating in a "book" of the conversation if undetected

Exploration of psychological concepts and ethical dilemmas

└ CURRENT STATE OF DEVELOPMENT ─

Visual Elements to Include:

1. Main Menu Screenshot: Showing "New Game" option
2. Opening Narrative: Text explaining the interception scenario
3. Email Interface: Sample email with multiple-choice responses
4. Credibility Meter: Visual of the 3-heart system
5. End Game Screen: Example of the generated "book" of emails

Development Progress:

1. Core gameplay mechanics implemented
2. Initial email exchange sequence completed
3. Basic scoring system functional
4. Playtesting phase begun (as evidenced by collected data)

└ CURRENT STATE OF DEVELOPMENT ─

"Love is a maze of whispered emotions—some heard, some lost. But what if you could listen in on the most private confessions of the heart?"

You are about to intercept an intimate exchange between two psychologists, Dr. Evelyn Carter and Dr. Liam Hayes, as they discuss the fragile truths of love, relationships, and human connection. Your mission? To impersonate one of them—crafting responses so convincing that the other never suspects a thing.

But beware: One wrong word, one unnatural phrase, and the illusion shatters. Can you navigate the echoes of their hearts without detection?

Your journey begins with the next unread email...

From: Dr. Emily Carter

Subject: Re: Recent Case Observations

Many people are looking for a couple, trying so to solve their problems. They naively assume that the love relationship will cure them of boredom, anguish, a lack of smear in life. They hope that the partner will fill the void of their life. What a gross fallacy! When we choose a couple for ourselves, having such hopes for it, after all, we can not avoid being hysterical towards the person who did not expect our expectation. And then? Then we look for the next partner, and for him another, then - again and again ... Or we decide to spend the rest of our lives alone, wishing for a cruel fate. To avoid this, we must deal with our own lives, not expecting that someone will do this for us.

➤ EVALUATION APPROACH ➤

Objectives:

1. Assess player engagement and immersion
2. Measure perceived challenge level
3. Evaluate emotional involvement
4. Test clarity of game objectives
5. Gather feedback on overall experience

Instruments Used:

1. Flow Short Scale: Measuring flow state during gameplay
 - 17 items assessing concentration, absorption, challenge-skill balance
 - 7-point Likert scale
2. Player Experience Inventory (PXI): Comprehensive player experience
 - 22 items covering meaning, emotional involvement, immersion, mastery
 - 7-point Likert scale

DISCUSSION OF COLLECTED DATA

Flow Scale Findings (7 responses):

- Moderate flow experiences (average scores 3-5 on 7-point scale)
- Highest scores for "My thoughts/activities run fluidly" (multiple 5-6 ratings)
- Lowest concern about failure (scores 2-3 on worry about mistakes)
- Balanced challenge perception (mostly 3-4 on "right amount of challenge")

PX1 Findings (7 responses):

- Strong emotional involvement (multiple 4-5 ratings)
- High scores for "I had a good time" (several 5-7 ratings)
- Positive aesthetics appreciation (5-7 on look/feel items)
- Clear objectives (mostly 5-6 on goal clarity)
- Some variability in sense of mastery (3-6 ratings)

DISCUSSION OF COLLECTED DATA

Key Insights:

1. Players found the game engaging and emotionally involving
 2. Challenge level was generally appropriate
 3. Aesthetics and interface were well-received
 4. Some players wanted clearer feedback on progress
5. Sense of mastery varied, showing that some players struggled with the deception mechanic

NEXT STEPS

Short-term (Next 2 Weeks):

1. Refine response scoring system
 - Show feedback after each answer
2. Add more specific progress feedback
 - Send warning emails
3. Adjust difficulty curve based on flow state data
 - Add difficulty options
4. Polish UI based on aesthetic feedback so it matches the game's concept
 - Make it look like a real email app
5. Make the game more freedom
 - Implement open-text responses for the player

THANK YOU!
